NIPUN KUSHWAHA

Full Stack Engineer

Delhi, India | +91 79829 68400 | nipunrajput077@gmail.com | Portfolio: nipun-port.vercel.app | GitHub: /NipunKachwaha | LinkedIn: /in/nipun-

PROFESSIONAL SUMMARY

Results-driven Full Stack Engineer specializing in architecting scalable backend systems and high-performance user interfaces (UI) using React, Node.js, and C#/.NET. Proven track record of translating complex technical requirements into production-ready platforms, reducing system latency, and accelerating client-side rendering by up to 25%. Highly skilled in integrating artificial intelligence (AI) agents and large language models (LLMs) to automate workflows, eliminate manual administrative overhead, and drive concrete business value.

EDUCATION

Delhi University | Bachelor of Arts **Expected May 2027**

Indian Institute of Computer Science | Advanced Diploma: Website Engineering (Full Stack Development) **Expected Nov 2026**

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, PHP, SQL
- **Frontend:** React, Next.js, Tailwind CSS, Three.js
- **Backend:** Node.js, Express.js, FastAPI, RESTful APIs, GraphQL, Django, Laravel, .NET
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Pinecone
- **Cloud, DevOps & Tools:** Google Cloud Platform (GCP), Docker, Kubernetes, CI/CD, Linux, Git & GitHub, WordPress
- **AI, ML & Data:** Pandas, Foundation Models (LLMs), Autonomous AI Systems, LangChain, LangGraph, RAG Architectures

EXPERIENCE

Independent Consultant | Full Stack Engineer **Nov 2025 – Present**

Architecting digital infrastructure and high-converting acquisition funnels for enterprise clients.

- Spearheaded the end-to-end development of 3 high-performance web applications using **React** and **Node.js**, translating complex client requirements into scalable platforms that boosted online booking conversions by 45%.
- Architected custom artificial intelligence (AI) agents utilizing **Python** and **LLMs** to automate scheduling pipelines, eliminating 20+ hours of manual administrative overhead per client weekly.

PROJECTS & VIRTUAL EXPERIENCE

Sverkos | AI-Powered Development Platform

GitHub Repo | *Live Demo*

- Architected a comprehensive multi-module AI platform using **Next.js** and **React**, implementing a Bring Your Own Key (BYOK) system to dynamically route prompts across 10+ LLMs and optimize system inference costs.
- Led the integration of a secure in-browser integrated development environment (IDE) using the WebContainer API, enabling zero-latency code execution that drastically accelerated developer onboarding workflows.
- Orchestrated robust backend infrastructure via Supabase and Drizzle object-relational mapping (ORM), seamlessly powering a 60 frames per second (FPS) 3D user interface using **Three.js** to maximize user engagement.

Ghost AI | AI System Architecture Generator

GitHub Repo | *Live Demo*

- Spearheaded an agentic AI architecture generator utilizing **Next.js** and the Google Gemini API, autonomously processing and visually rendering 100+ complex node configurations from natural language inputs.
- Engineered a scalable real-time multiplayer canvas via Liveblocks, synchronizing state for 50+ concurrent engineering users to accelerate collaborative technical scoping by 40%.
- Automated high-throughput background workflows with Trigger.dev to instantly translate visual graphs into comprehensive Markdown specifications, ensuring zero data loss via debounced auto-saving to a **PostgreSQL** database.

LLM Arena | Real-Time AI Model Racing

GitHub Repo | *Live Demo*

- Architected a highly concurrent AI evaluation platform using **Next.js** and **PostgreSQL** to seamlessly stream and benchmark up to 3 open-source LLMs side-by-side without main-thread blocking.
- Designed real-time telemetry pipelines to accurately track tokens-per-second and cost metrics, translating raw data streams into a dynamic, data-backed public leaderboard for AI performance.
- Hardened API endpoints against malicious bot traffic and prompt injections using Arcjet, establishing robust telemetry via PostHog and automated code reviews via Greptile.

Commonwealth Bank | Software Engineering Virtual Experience

Enterprise Simulation (Forage)

- Expanded enterprise-level backend APIs using **C#** and **.NET** for dynamic icon management, designing optimized schemas to store core financial records in **MongoDB** and streamline data retrieval.
- Orchestrated frontend state management with **React**, Redux, and **TypeScript**, significantly improving cross-platform rendering efficiency and cutting overall UI load times by 25%.
- Executed comprehensive automated unit testing pipelines with xUnit to maintain strict 100% test coverage, resolving 15+ complex integration bugs and ensuring zero regressions prior to deployment.

Electronic Arts (EA) | Software Engineering Virtual Experience

Gaming Architecture Simulation (Forage)

- Architected foundational gameplay mechanics and authored a comprehensive 10-page technical specification document, successfully aligning cross-functional engineering teams and accelerating feature delivery.
- Developed optimized **C++** class diagrams and header files, streamlining complex game entity behaviors and heavily reducing server-side memory footprints.
- Identified and resolved critical data processing bottlenecks, boosting core system operational performance by 15% through the implementation of advanced data structures.

CERTIFICATIONS & ACHIEVEMENTS

- **Claude Code in Action:** Advanced certification in leveraging LLMs and AI-assisted development tools to automate scripting and accelerate continuous integration workflows.
- **Microsoft Learn AI Achievements:** Earned 8 official achievements in Azure AI, Microsoft Foundry SDK, RAG-based solutions, and GenAI model evaluation pipelines.
- **Google Marketing Certifications:** Officially certified in Google Analytics, Google Ads Display, and AI-Powered Shopping Ads to drive targeted conversion strategies.
