PROFESSIONAL SUMMARY

Full-Stack AI Engineer specializing in building and shipping end-to-end AI-powered web applications and custom AI agents. Proven experience architecting solutions from vector-search backends and Google Cloud Gen AI integrations to interactive 3D interfaces. Successfully delivered production-ready projects—including scalable web platforms and automated AI agents for local businesses—using Next.js, Three.js, and LLM-based retrieval. Adept at owning the entire development lifecycle, from system architecture and data integration to robust cloud deployment.

SKILLS

Languages: JavaScript, TypeScript, Python, PHP, C++, SQL, Bash

AI & ML: LLMs, AI Agents, LangGraph, Vertex AI, RAG Pipelines, LangChain, LlamaIndex, Hugging Face, OpenAI API, Prompt Engineering

Frontend: React, Next.js, Redux, Tailwind CSS, WebSockets, Three.js, WebGL, GSAP

Backend: Node.js, Express, FastAPI, Laravel, .NET, RESTful APIs, GraphQL, Nginx

Databases: PostgreSQL, MySQL, MongoDB, Redis, Pinecone, ChromaDB, Firebase

Cloud, DevOps & Tools: Google Cloud Platform (GCP), Docker, Kubernetes, CI/CD (GitHub Actions), Terraform, Linux/Ubuntu, Git, Postman, Figma

LANGUAGES

- **Hindi**
Native
- **English**
Intermediate

CERTIFICATIONS

Claude Code in Action
Google Analytics
Deloitte Australia Data Analytics Job Simulation
AI-Powered Chatbots with RAG
Microsoft Azure Fundamentals

EXPERIENCE & SIMULATIONS

Job Simulation: Software Engineering **FORAGE** Mar 2026 (self-paced)
Commonwealth Bank — via Forage

- Extended a mock backend service in **C# / .NET** to add dynamic icon support, modeling data persistence in **MongoDB** and validating endpoints with **Postman**.
- Built **React/Redux + TypeScript** components to render the new icon feature, keeping UI state in sync with the backend contract.
- Wrote **unit tests with xUnit** to cover the new endpoints and followed a Git-flow branching workflow for the submission.

Virtual Internship: Software Engineering **FORAGE** Feb 2026 (self-paced)
Electronic Arts (EA) — via Forage

- Proposed a new gameplay feature for **EA Sports College Football** and wrote a technical design doc mapping the mechanic to project goals.
- Modeled system logic in **C++**, producing class diagrams and header files with object-oriented definitions for game entities.
- Refactored a section of sample game code, replacing a linear search with a more efficient data structure to resolve a flagged performance bug.

EDUCATION

Indian Institute of Computer Science Expected Nov 2026
Advanced Diploma: Website Engineering & Digital Marketing

Delhi University Expected May 2027
Bachelor of Arts

PROJECTS

• **Sverkos** – AI App Builder Platform Live Demo | GitHub
Next.js, Supabase (pgvector), Clerk, Node.js, OpenAI, Pinecone

Engineered a full-stack AI application builder that empowers users to generate, configure, and manage web applications entirely through natural language prompts.

Scaled the platform architecture to support over 100 registered user accounts who have successfully created and deployed more than 400 custom projects.

Optimized the backend retrieval pipeline and API integrations, handling over 2,000 monthly generation requests while reducing average project load times by 40 percent.

• **sooahkimsfolio** – 3D Interactive Portfolio Live Demo | GitHub
Three.js, WebGL, GSAP, Vite

Built a fully client-side 3D WebGL portfolio: a navigable virtual room with custom GLSL shaders, spatial audio, and raycasting-based interactions — no backend required.

Tuned the render loop and asset loading to keep the scene smooth at 60fps on mid-range hardware, a common failure point in Three.js portfolios.

• **Interactive 3D Web Book** Live Demo | GitHub
Three.js, WebGL, GSAP, HTML5/CSS3

Designed a reusable 3D "page-turn" book component for web apps, with cinematic GSAP-driven transitions between pages and states.

Packaged the component to be dropped into other Three.js projects, keeping render performance stable across page counts.

• **Immersive Narrative Web Experience** – 3D Storytelling Live Demo | GitHub
Three.js, Blender, WebGL, React.js

Developed an interactive 3D web prototype built around a stylized narrative concept, focused on scroll-driven scene transitions and mood-based lighting.

Modeled and textured custom 3D assets in Blender and integrated them into a React/Three.js pipeline with layered ambient audio for an immersive feel.
